

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

methods ; a description of the collector's outfit; field-work, how performed; closet-work and care of herbarium; correspondence and exchanges; and some account of public herbaria and museums of vegetable products. Apparatus will be fully illustrated. The work will be placed at so low a price as to bring it within the reach of all; but, as a further inducement, the publisher offers a discount of 10 per cent. from the prospective price of \$1.50 to all who subscribe before the book is published.

§ 31. **Proceedings of the Torrey Botanical Club.**—The regular monthly meeting of the Club was held at the Herbarium, Columbia College, Tuesday evening, Feb. 8th. In the absence of the presiding officers the chair was occupied by Mr. J. D. Hyatt. There were present eighteen members and two visitors.

Mr. Britton read an interesting communication from Mr. H. H. Rusby, giving a sketch of the general character of the flora of New Mexico.

Plants Exhibited.—Mr. Wright exhibited a beautiful collection of Australian ferns which were sent by Mr. Chorlton for the Club's herbarium. Mr. Gerard exhibited an example of

Heterophyllum in *Hepatica*.—The leaf shown was one of several similar ones taken from the same plant, and each of which possessed a like peculiarity—the middle lobe being deeply trilobate and the lateral ones bilobate (as seen in the annexed figure), thus making an approach toward the leaf-forms found in the genus *Anemone* into which the old genus *Hepatica* is now merged

Mr. Schrenk showed and remarked upon a specimen of *Silene Pennsylvanica* having a pentamerous ovary, and which is referred to at more length on another page of the present number.

A note from Mr. O. R. Willis was read, stating that the biographical sketch of the late Prof. Wood in course of preparation by him would be presented before the Club at the next meeting.

§ 32. **Ferns of New Mexico.**—For the benefit of lovers of ferns, we give the following list of the 14 species which are comprised in the sets now being distributed by Mr. Henry H. Rusby. The specimens were collected in Grant County, New Mexico, during the fall of 1880, and no pains have been spared by Mr. Rusby to have them complete, perfect, beautiful and ample. Those of our friends who have purchased sets are highly pleased with them. *Gymnogramme hispida*, Mett., *Notholaena sinuata*, Kaulfuss, *N. Hookeri*, D. C. Eaton, *N. dealbata*, Kunze, *Cheilanthes Wrightii*, Hook., *C. lanuginosa*, Nutt., *C. Eatonii*, Baker, *C. Fendleri*, Hook., *C. Lindheimeri*, Hook., *Pellaea atropurpurea*, Link, *P. Wrightiana*, Hook., *P. andromedaefolia*, var. *pubescens*, Baker, *P. ternifolia*, Link, and *Woodsia Oregana*, D. C. Eaton, variety.
